

Cemindo Gemilang Bayah 10'000 TPD Integrated Cement Plant

Dr. Hans Wilhelm Meyer
CEMCON AG

With the support of CEMCON AG an EPC turn-key contract for a 10'000 TPD Cement Plant Project in South East Asia could be signed between the Client and a globally active Cement Plant Manufacturer. This project includes state of the art technology and is demanding in its execution. The project does not only comprise of the 10'000 TPD cement plant but also includes a 7.5 km overland belt conveyor system to be built in difficult terrain but also of a harbor with unloading facilities for additives, correctives and coal and loading facilities for clinker, bulk and bagged cement. Also the execution of the harbor requires high technological efforts due to the difficult hydrological situation.

Intensive and embedded teamwork together with the client's project team enabled the optimization of the applied technology and the negotiation of a suitable and protective contractual structure and content.

Again it is proven: We serve for your success.
